DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 12/27/2007, with respect to claims have been fully considered and are persuasive. The 112 1st rejection of claims 1,2,4,9-11 has been withdrawn.
2. The applicant has amended claims 9 and 10 to overcome the 101 rejection set forth in the previous office action.

Allowable Subject Matter

3. Claims 1-12 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Regarding claims 1,3,9- and 12, prior art Velmer (US 5,515,446).discloses a frequency characteristic adjustment apparatus in which an inputted signal is subjected to adjustment for making a frequency characteristic of the signal agree with a target frequency characteristic (Figure 1), the apparatus comprising: an estimation device configured to divide the inputted signal into a signal component falling into a plurality of signal components and to estimate a relative level of the signal component (22 channel accurate reproduction circuit, Figure 1; column 5, lines 45-column 6-line 5); an adjustment device configured to adjust the level of the signal component of each variable-level band of the signal based on the estimated relative level of the signal component in each variable-level band (62,64,66,68,70,72,74, 76 limiters , Figure 1; column 6, lines 5-24); and an output device configured to output the signal adjusted by

Art Unit: 2615

the adjustment device (output circuit 24, Figure 1). Prior art Ouchi et al. (US 6,072,879) discloses a sound field control device comprising equalizers 134 and 140 and that a fixed level band is centered at a frequency of 1kHz (column 11, lines 36-65). Prior art Sasaki (US 6,996,240) teaches of equalizing the sound source and the sound picked up by the microphone (column 3, lines 17-46). Prior art Berkovitz et al. (US 4,458,362) discloses a computer program that implements equalization (column 15, lines 33-40). Prior art Lawton (US 5,987,145) discloses a digital audio equalizer.

Regarding claims 1,9,11 the prior art or combination thereof fails to disclose or make obvious estimating a relative level of the signal component in each variable level band on the basis of the level of the signal component in the fixed-level band in the target frequency characteristic.

Regarding claims 3, 10 and 12, the prior art or combination thereof fails to disclose or make obvious dividing an audio signal into a signal component falling into one fixed level band and one or more signal components falling into one or more variable level bands and to adjust levels of the signal components in only the variable level bands of the audio signal.

Claims 2,4-8 are allowed due to dependency on claim 1.

Therefore the prior art or combination thereof fails to disclose or make obvious a frequency characteristic adjustment apparatus and a method of adjusting a frequency characteristic of an input audio signal as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
